Bill Perry

In class activity 8: Study Design and Power Analysis

Introduction

This activity demonstrates key concepts in experimental design using a made up fish example:

1. **Formulating research questions**
2. **Understanding study designs**
3. **Recognizing proper replication vs. pseudoreplication**
4. **Conducting power analysis** (before and after data collection)
5. **Planning sampling strategies**

We'll study fish mass above and below waterfalls across multiple streams.
