

01 class activity

In class activity 1:

Objectives and goals

- Can you identify inductive or deductive reasoning?
- How do you formulate a question?
- Can you develop a prediction?
- What are hypotheses - Null and Alternate?
- What are dependent and independent variables?
- What is a replicate and how do we sample?
- How do we organize data?
- How do we graph the data we gather?

Schedule:

- Head to the field outside of Swenson and go to pine stand
- Discuss approaches to science and how to make observations
 - Point out the North versus South side of a pine tree and how weather might affect the needled dimensions
- Return to laboratory and measure pine needles
- Organize data
- Make graphs to see what data looks like visually
